

# STUDENT LED GRANTS 2022

APPLICATIONS  
DUE  
JANUARY 6,  
2022

\$2,000  
REQUEST  
LIMIT

PROJECTS MUST  
BE COMPLETED  
BY END OF  
2021-22  
SCHOOL YEAR

This program is designed to support HSE21 instructional framework and best practices to provide students with an opportunity to use their student voice and choice to create a relevant learning experience.

Projects can support a variety of ideas, as long as they are student-driven in their creation. Some examples include:

- units of study within a classroom or grade level through inquiry-driven study
- support an identified need within a school or local community
- support a service-learning project

Project ideas should originate between a group or class of students and an HSE educator who will act as a mentor and facilitator throughout the project duration. Students should be engaged in the creation of idea, proposal drafting, and project implementation using guidance and support from their mentor. However, the HSE employee mentor should be main contact submitting application via Smarter Select.

HSEF does not typically fund:

- highly consumable supplies including apparel/food/party supplies, incentives or monetary prizes,
- basic classroom or student needs including curriculum books without an innovative program
- courses taken by staff for credit toward a degree or advanced salary schedule
- compensation and benefits for employees or students, travel expenses
- student club expenses.

HSEF also considers sustainability and does not typically fund projects that require consumables that do not result in long term impact.
